Here is the filter that was generated with the original drop

When you click on the Value portion of that filter, the entire set of files that are covered by the filter rules pops up. Now you can highlight a target filename that you would like to remove, and just erase that line and check the green checkmark for OK.

Enter the name of the folder:

White cursor in Timeline →

.dat	represent saved <i>data</i> for perpetual sessions and color palettes; maybe others
.idx	original <i>index</i> files that were created for loaded video to speed up seeking
.mkr	ffmpeg specific <i>marker</i> index file that is created for each video to aid seeks
.rc	rc stands for <i>run commands</i> so basically represents a script
.toc	toc is <i>table of contents</i> file for MPEG video files (a type of index)
Cinelerra_plugins	a list of the currently loaded plugins available in your CINELERRA-GG session
Cinelerra_rc	the user's preferences and settings are saved in this file to be used on startup. This file can be carefully edited to change startup values for certain parameters, but if you inadvertently set up something incorrectly, you may end up crashing the program.
ladspa_plugins...	list of currently loaded ladspa plugins for each version of CINELERRA-GG being used
layout#..._rc	user-defined window layout setup with the layout name as part of the file name
.xml	used for various backups or for the current settings of plugins that you have used
.png	thumbnails of files in Resources so they do not have to be created over and over
